Products

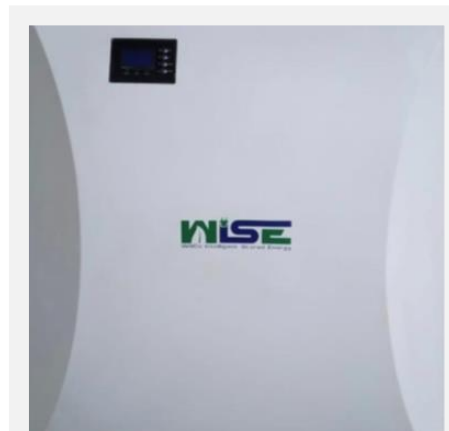

Solar Systems

Wise Power has entered an exclusive teaming agreement with The Solar Guys to provide solar systems and energy storage installations. The addition of The Solar Guys provides a wide variety of solar solutions including rooftop, carport, ground-mount, and other structures. Solar plus energy storage systems offer the greatest value for clean energy and money-savings solutions.

Solar Storage

The Verd2Go® energy storage system uses a revolutionary design that we call Power Packs. This unique configuration has a docking station with up to 10 cells that each store electricity. The Power Packs can be removed and taken to a room or outside to power electronics through the built-in USB ports.

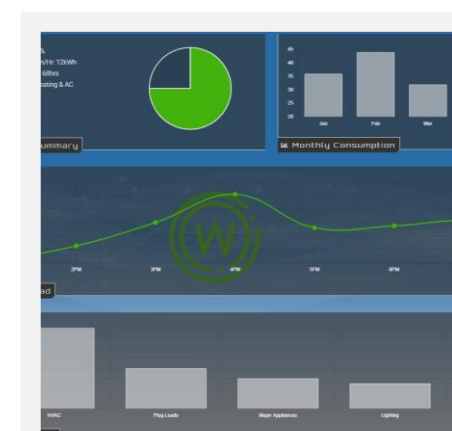

Intelligent Storage

Wise Power creates intelligent energy storage systems (ESS) to serve residential and commercial markets. These scalable and customizable systems are stocked in 10kWh, 25kWh, and 50kWh units. Other size requirements can be met through special orders that take 60-90 days for delivery. Our ESS proposal savings calculations are based on these product sizes.

Large-scale Storage

Wise Power can scope and quote large energy storage projects. These Megawatt Hour (MWh) systems come in container style enclosures. They house a fully self-contained ESS including air conditioning, fire suppression systems, and sophisticated communications. These systems support solar farms, Virtual Power Plants, industrial applications, and stand-alone wholesale generation interconnect projects.

Energy Monitoring

Wise Power has created a private cloud design and custom middleware to support our Distributor network. We can collect and disseminate data, along with hardware systems to establish Virtual Power Plants. We are also developing a new energy storage generation interconnect program using our hardware and software.

Sell Wise Power Patented Products

Earn commissions as a Wise Power Distributor selling our products

- PV Solar Systems

- Residential solar
- Commercial solar
- Large-scale solar

- Intelligent Energy Storage Systems

- Small portable systems
- Home or business systems
- Industrial sized systems

Our Mobile Apps Will Monitor The Systems

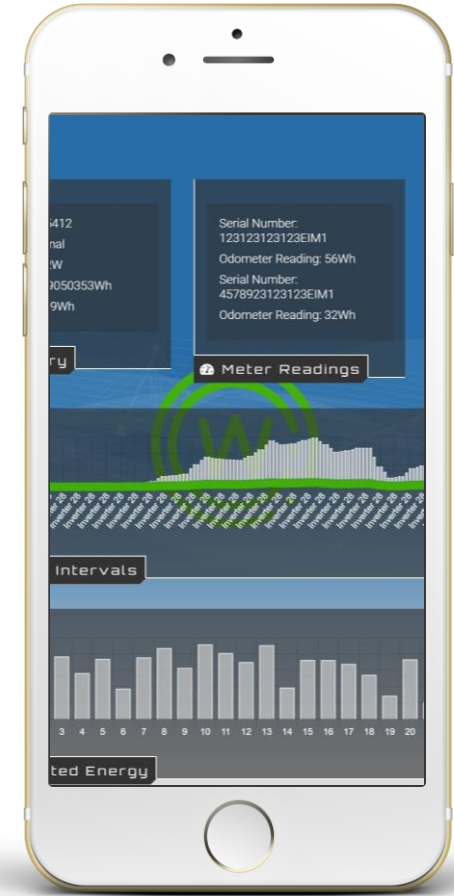

Wise Power App

Secure Login for IOS and Android platforms

Solar & Storage

Access the solar panel and energy storage

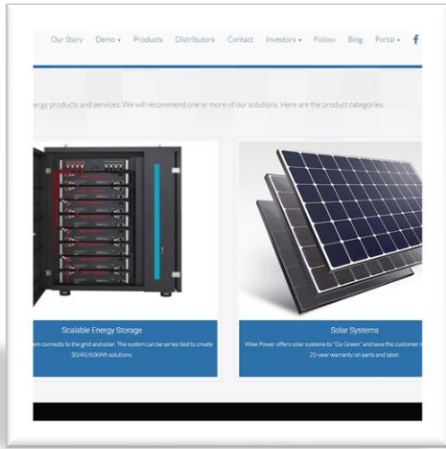

Monitoring

Monitor the performance of the installed systems

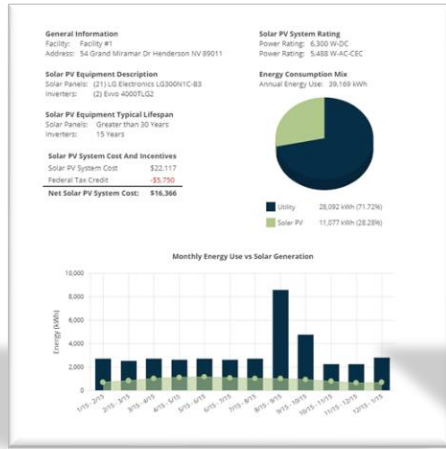

Project Management Support

Distributors receive a custom support package, and we do professional installations of your projects

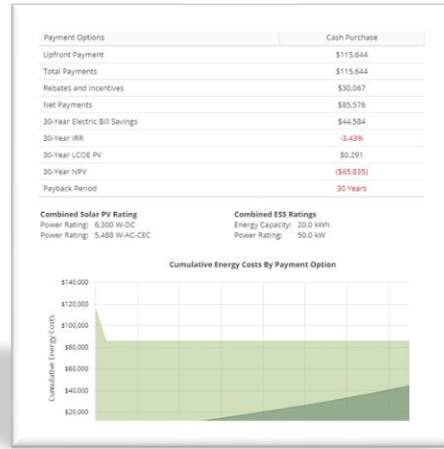

Proposal Preparation

We collect customer usage data through our secure portal and transfer it safely to a private cloud.

Data Analytics

We analyze the data to determine the best Wise Power solar & storage products for the project.

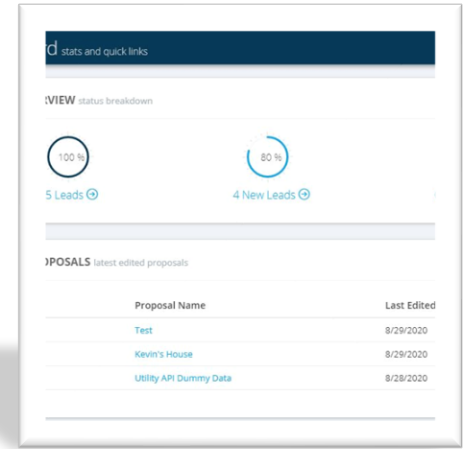

Project Calculations

We calculate the solar & storage monthly savings on the customer's utility bill.

Project Presentation

We prepare a custom proposal presented from you to your customer.

Project Management

We provide leads tracking and customer relationship management tools.

New Business Opportunity

Just 3 Easy Steps

Complete The Questionnaire

- Complete a short questionnaire to tell us about you or your company.
- We will go through a brief interview with you.
- You learn more about the opportunity and earnings potential.

Sign The Agreement

- Review the Wise Power Distributor Licensing Agreement.
- We answer your questions and provide additional info.
- Sign the Licensing Agreement to join the network and get starting with your business.

Receive Your License

- Pay a small monthly licensing fee to get your license.
- Gain access to the support portal and get assigned a dedicated Account Executive.
- Get marketing materials and receive leads as an authorized distributor.

- Use our portal to submit customer usage bills
- Our system will generate a project proposal

- Distributors earn money on solar projects
- Distributors earn money on energy storage projects
- Distributors earn money on monitoring projects
- *Avg. Commission is over \$3,800 per project
